NATHAN OLENIK

Student

PROFILE

Hello my name is Nathan, this resume is for the purpose of obtaining a job in data security or web development. The education and work experience only list things related to the IT field. I have other schooling and past work experience that is not related that explains why the history is someone short. I am currently studying full stack web development and plan to learn other programming languages after the class is over. I have a link to my github page below that shows all the web pages I have built so far.
